# Slide object actions

When you select any object on a slide, a number of actions can be performed. You can click the three dots to access this list of controls as shown in the below example:

These actions may vary depending on the selected object. The following table lists the actions that can be performed:

Button	Action
Select similar	To select all the objects which are similar in type to the selected object, i.e. all text fields or all article images
Bring to front	To move the selected object(s) in front of the other objects. You can also press Fn and Page up keys
Send to back	To move the selected object(s) behind the other objects. You can also press Fn and Page down keys
Group	To combine the selected objects into one group. This option changes to Ungroup to separate objects in a group back into individual objects
Copy selection	To copy the sected object(s)
Align	To align objects on the slide, i.e. left, right, center, or distribute objects vertically or horizontally
Remove	To remove the selected objects. You can also press the **Backspace** or **Delete** keys on your keyboard to remove the selected items.
Edit colorways	To edit colorways as mentioned in "Edit colorways"

Edit segmentations	To edit the colorway segmentation as mentioned in "[Edit segmentations](#)"
Edit retail window	To edit the retail windows for the selected colorways as mentioned in "[Edit retail window](#)"
Edit favorites	To edit colorway favorites as mentioned in "[Edit favorites](#)"

Note:

- You can click and hold the upper object holder to rotate it in any direction you want.
