

Colorways blocking

Through this module, you can block specific colorways in the master catalog from appearing in certain child catalogs depending on attribute values. The **Colorways Blocking** page appears as shown below:

Attribute Display Name	Attribute Value	Reason	Status	Updated Date	Updated By	Actions
<input type="checkbox"/> Age Group	Adult		Active	Feb 23, 2024	rasha.saeed@trasix.com	
<input type="checkbox"/> Comp Style	1305375		Active	Feb 23, 2024	rasha.saeed@trasix.com	

The page displays the attribute according to which the colorway will be blocked in the child catalog along with the value, status, and reason.

You can add more attributes, update or delete any of the existing ones, import a list of attributes to T1, and view the colorways that are blocked based on each attribute, as discussed in the following sections.
