

Colorway state

Through this module you can manage different colorway states. States can help users manage their colorways throughout the planning, design, creation, production and selling phases. Click **Colorway states** from the left menu, the following window appears:

State Id	State Name	State Rank	Status	Is Style Level	Is Default	Actions
1	Architecture-0	0	Inactive	False	False	
2	Architecture-1	1	Inactive	True	False	
4	Architecture-2	2	Inactive	True	False	
3	Architecture-3	3	Inactive	True	False	
8	Sell-in	4	Inactive	False	False	
5	Architecture-5	5	Inactive	False	False	
6	Design	6	Inactive	False	False	
7	Production	7	Inactive	True	False	
11	Architecture	8	Active	False	True	
10	Design	9	Active	False	False	
9	Sample	10	Active	True	False	
12	Production	11	Active	True	False	

Colorway states are listed, for each one the state rank, status, whether it is at the model level, whether the state is default or not, and the updated date. You can also manage state attributes which act as conditions on the colorway states and when conditions are met, actions can be applied. The following sections discuss how to view the state details, add a new state and manage its attributes, edit, delete and activate states, etc.

Note:

- For child catalogs, adding and deleting states is not possible and buttons are not available.
