

## Segmentations

Through this page, you can define segmentations for a catalog in order to assign articles and customers to those segmentations. Customers can only see and order articles within the same segmentation to which they are assigned.

View the catalog you want then go to **Segmentations** tab, the following page appears:

The screenshot shows a web application interface for managing segmentations. At the top, there is a horizontal navigation bar with tabs: Catalog, Attributes, Configurations, Delivery Dates, Price Group, Segmentation Group, Segmentations (which is highlighted with a blue underline), Stock Definition, and Tree. Below the navigation bar is a toolbar containing icons for selection, copy, delete, undo, redo, and a status indicator that says "0 of 2 Selected". To the right of the toolbar are three vertical dots and a refresh icon. The main content area is a table with the following columns: Name, Description, Status, Updated Date, and Actions. There are two rows of data: "Segmentation-1" and "Segmentation-2". Each row has a checkbox on the left, followed by the name and description, a status indicator (a green dot and the word "Active"), the updated date (Sep 27, 2020), and an actions menu (three vertical dots). At the bottom right of the table area, there is a red circular button with a white plus sign.

Segmentations defined for this catalog are listed. For each one, the description, status, and updated date are displayed.

You can add a new segmentation, import a file with segmentations, update or delete any of the existing ones as discussed next.
