

Create order chart

To create a chart, follow these steps:

1. Click  then click , the following window appears:

The "Create Chart" dialog box features a blue header with a close button (X). It contains two input fields: "Data Range 1 *" and "Operator *". Below these, there is a "Data Range 2" field which is disabled (indicated by a dotted border). To the right of the "Data Range 2" field is a toggle switch labeled "Include Inactive Records". At the bottom left, there is another toggle switch labeled "Create for All Users". The bottom right corner contains three buttons: "CANCEL", "SAVE", and "SAVE AND NEW".

Notes:

- *Create for All Users* slider button is only enabled for the Trasix user authorized to create global charts. These charts can be accessed by all seller users assigned to the catalog.
2. Enter the order field according to which you want the chart to be created in the "Data Range 1" field, or click on the field and select the field you want,
 3. Click the "Operator" field and select one of the following operators:
 - **Count:** chart is divided according to the number of orders with the selected field. The "Data Range 2" field is disabled.
 - **Sum:** chart is divided according to the field selected in "Data Range 1" showing the summation of values of the numeric field selected in "Data Range 2".
 4. Click the slider button next to *Include Inactive Records* if you want the inactive orders to be included in the chart,
 5. Click **Save** to create the chart, or click **Save and New** if you want to save the chart

and create another one,

The below page shows three examples of charts:

The first chart shows the count of orders according to their processing status. The second chart is the summation of the total current value according to the total quantity of orders, while the third is the summation of total quantity of orders according to the total current value.

Please note that the colors of the charts sections are randomly generated.
