

Seller details - Lookup table

Note:

- This tab is only available for master sellers.

Through this tab, you can manage lookup definitions in a way similar to the Vlookup in Excel. The lookup can be defined using the attribute groups of the selected seller, then based on the selected source attributes, values are calculated for the destination attributes. The tab appears as shown in the below example:

Name	Attribute Group Name	Source Attributes	Destination Attributes	UpdatedBy	Updated Date	Actions
Lookup1	Attributes	article_type ColourwayGroup	Colorway Department Colorw		Dec 7, 2022	

Lookups for the selected seller are listed, for each one, the attribute group name, source and destination attributes, the user who updated the record and the update date are displayed. You can view the lookup and its values, add, delete any of them as mentioned in the following sections.
