

## Seller-level configurations

Through this tab, if you have the required privileges, you can add configurations at the seller level which are the same for all the seller's catalogs. Below is an example:

Name	Value	Default Value Type	Updated Date	Actions
T1S-EnableNewStyleDetails	true	bool	Dec 12, 2023	
T1S-DisableModules	['dashboard']	nvarchar	Dec 12, 2023	

The configurations are listed along with the value, default value type, and updated date. The above configurations are added for all catalogs, however, if the same configuration is added to the catalog, then the catalog-level configuration overrides the seller-level configuration.
