

# Article blocking

Through this module, you can block specific articles in the master catalog from appearing in certain child catalogs depending on attribute values. The **Article Blocking** page appears as shown below:

0 of 1 Selected							
Spring Collection 2...	Attribute Display N...	Attribute Value	Status	Updated Date	Reason	Actions	
<input type="checkbox"/>	Yes	Color	Grey	Active	Mar 7, 2019	Blocked	

The page displays the attribute according to which the article will be blocked in the child catalog along with the value, status, and reason.

You can add more attributes, update or delete any of the existing ones, import a list of attributes to T1, and view the articles that are blocked based on each attribute, as discussed in the following sections.
